

Fruit inners

Fruit inners are used for packing of various fruits, especially apples, pears, peaches, apricots or citruses. The inners fulfil simultaneously several functions:

- perfect protection during transportation in crates
- easy and effective manipulation
- professional and attractive presentation of the products displayed on inners and in cardboard or wooden crates, usually printed with various designs
- storage, transportation, delivery to wholesalers, retail shops and often also to the end users.

AICA branded fruit inners are produced of polypropylene and basic assortment includes inners of the following parametres:

- inner dimension 39 x 59 cm for cardboard crates with dimensions 40 x 60 cm or
- 37 x 57 cm for plastic crates
- usually bright blue modification but other colours can be also delivered, e.g. black one for attractive contrast with bright red or yellow fruits.
- The following table sheet reviews the size and number of fruits which can be placed on one inner

<i>Inner Dimension (cm)</i>	<i>Number of Holes</i>	<i>Fruit Diameter (mm)</i>
39 x 59	25	95
39 x 59 / 37 x 57	28	87
39 x 59 / 37 x 57	30	86
39 x 59 / 37 x 57	32	81
39 x 59 / 37 x 57	35	78
39 x 59 / 37 x 57	37	75
39 x 59 / 37 x 57	38	74
39 x 59	39	73
39 x 59	42	70
39 x 59	48	68

The inners are packed in cartons of 700 pcs.

Advantages of the AICA branded inners:

- comprehensive assortment for fruits of all sizes
- excellent quality, the material can be fully recycled
- certification for use with foodstuffs
- competitive price
