

Self - locking tree protectors

Self-locking tree protectors prevent browsing and can save so considerable values and long time efforts producers of trees. One of the biggest advantages of the AICA branded tree protectors, no doubt, is their easy installation which does not require any other materials like wires, ropes, fixings or even longer manipulation. The protector itself is flexible and can increase its diameter the same way the tree grows and so there is no need of any additional manipulation with the protection increasing so considerably labour productivity of employees. The protectors are solid yet flexible, UV resistant and maintain their original shape even after years since their first use.

This is the reason they can be used repeatedly – an ideal way to substantial costs reduction. Wide assortment of the protections enables to chose right dimension and modification for any way of application.
